

## Information for healthcare and residential care workers

People who have returned from anywhere overseas, or have been in close contact with a confirmed case of coronavirus, are required to self-isolate for 14 days. If you develop symptoms including a fever and cough you should immediately and urgently seek medical attention.

This information sheet should be read in conjunction with the 'What you need to know' and 'Isolation guidance' information sheets found at [www.health.gov.au/covid19-resources](http://www.health.gov.au/covid19-resources).

### Can staff go to work?

Specific requirements are in place for people who have returned from overseas, or have been in close contact with a confirmed case of coronavirus.

Employees who are in isolation cannot go to work and should alert their employer. Depending on the type of work, and provided the employee is well, they may want to discuss alternative arrangements such as working from home. See the 'Isolation guidance' information sheets at [www.health.gov.au/covid19-resources](http://www.health.gov.au/covid19-resources)

### What should I tell my staff?

Employers should provide information and brief all employees and contract staff, including domestic and cleaning staff where applicable, on relevant information and procedures to prevent the spread of coronavirus. You should inform staff who meet the above criteria that they should remain isolated in their home. Employees should advise their employer if they develop symptoms during the isolation period, particularly if they have been in the workplace. Public health authorities may contact employers in the event an employee is confirmed to have coronavirus.

### What precautions should I take when cleaning?

When cleaning, staff should minimise the risk of being infected with coronavirus by wearing gloves and using alcohol-based hand sanitiser before and after wearing gloves. If cleaning rooms or areas of the workplace where a person with a confirmed case of coronavirus or a person in isolation has frequented staff may wish to wear a surgical mask as an added precaution. If a confirmed case of coronavirus or a person in isolation is in a room that cleaning staff need to enter, they may ask them to put on a surgical mask if they have one available.

### Can food and water spread coronavirus?

Some coronaviruses can potentially survive in the gastrointestinal tract however, food-borne spread is unlikely when food is properly cooked and prepared. With good food preparation and good hand hygiene, it is highly unlikely that you will become infected with coronavirus through food.

It is unknown at this time if the virus is able to survive in sewerage. Those who work closely with sewerage should take the same precautions as those outlined above for cleaners. Drinking water in Australia is high quality and is well treated. It is not anticipated that drinking water will be affected by coronavirus.

## How can we help prevent the spread of coronavirus?

Practising good hand and sneeze/cough hygiene and keeping your distance from others when you are sick is the best defence against most viruses. You should:

- Wash your hands frequently with soap and water, before and after eating, and after going to the toilet.
- Cover your cough and sneeze, dispose of tissues, and wash your hands.
- If unwell, avoid contact with others (stay more than 1.5 metres from people).
- Exercise personal responsibility for social distancing measures.

## More information

While coronavirus is of concern, it is important to remember that most people displaying symptoms such as fever, cough, sore throat or tiredness are likely suffering with a cold or other respiratory illness—not coronavirus.
